1. Introduction

1.1 What is this?

This is a template for producing PhD-thesis at Stockholm University (SU) using pdfL^AT_EX. It could also, with some alterations, be used for Master thesis and Licentiat thesis. Observe that it is designed to be used with pdfL^AT_EX and will not work (at least not as in the present state) with T_EX, L^AT_EX or pdfT_EX.

The template produces all necessary parts such as half title page, title page, printing info and so on. Simply input the information as called for in the file *thesis.tex*. It also produces a number of parts for the front matter and back matter. Some of these parts are mandatory and some are optional depending on whether the it is a monograph or a summary. Comment or uncomment these to fit your preferences. For more information see Section ??.

Sammanfattning

En kort summering av avhandlingen på svenska om avhandlingen är skriven på ett annat språk.
